

"TUNE UP"

I have started to "port" all my stoves since learning from Crispin Pempertin on how well it increased the performance on a \$ 5.00 stove he developed for use in Haiti to burn wood pellets after the earthquake.

It allows for a hotter better burn.

You will need the following;

- scribe
- tape measure
- tin snips
- needle nose pliers

I would be happy to tune it for any customer if they return the stove, I will pay the return postage

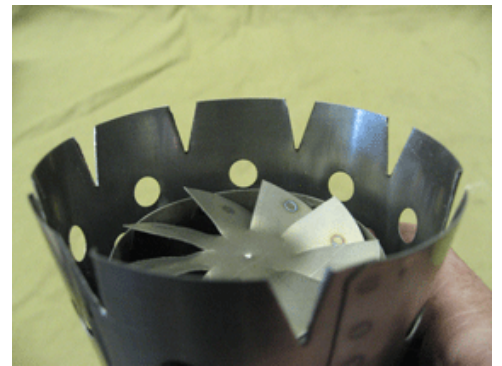

FOUR DOG STOVE
